

1. Choose the correct statement.

- a. Koplik spots may develop during measles in all kinds of patients
- b. Koplik spots develop during \\ measles only among children
- c. Koplik spots develop during measles only among adults
- d. Koplik spots develop \\ during measles only among immunocompromised patients

2. Choose the correct statement.

- a. Koplik spots may develop during measles in all kinds of patients
- b. Koplik spots develop during measles only among adults
- c. Koplik spots develop \\ during measles only among immunocompromised patients
- d. Koplik spots develop during \\ measles only among children

3. Koplik spot is a symptom specific only to measles.

- a. True
- b. False
- c. Not given

4. Koplik spot is a symptom specific only to measles.

- a. False
- b. Not given
- c. True

5. Measles can result in a brain damage.

- a. True
- b. False
- c. Not given

6. MeaslesMeasles is an acute viral disease characterized by fever, cough, coryza, and conjunctiviti

7. The highest mortality from measles is among the newborns.

- a. False
- b. True
- c. Not given

8. The highest mortality from measles is among the newborns.

- a. Not given
- b. True
- c. False

9. The most common complication of measles is the otitis.

- a. False
- b. Not given
- c. True

10. The most common complication of measles is the otitis.

- a. True
- b. Not given
- c. False

11. What are the most common complications of measles?

- a. Acute encephalitis and death
- b. Respiratory complications
- c. Neurologic complications
- d. Otitis, bronchopneumonia, croup, diarrhoea

12. What are the most common complications of measles?

- a. Neurologic complications
- b. Respiratory complications
- c. Acute encephalitis and death
- d. Otitis, bronchopneumonia, croup, diarrhoea

13. What categories of people most often have measles during measles outbreaks?

- a. Adults
- b. Elderly people
- c. Vaccinated with only one dose
- d. Unvaccinated

14. What categories of people most often have measles during measles outbreaks?

- a. Elderly people
- b. Vaccinated with only one dose
- c. Adults

d. Unvaccinated

15. What is subacute sclerosing panencephalitis (SSPE)?

- a. A complication of measles that happens only in adults
- b. A complication of measles that happens only in children
- c. A complication of measles that happens only in newborns
- d. The disease that is often mistaken for measles

16. What is subacute sclerosing panencephalitis (SSPE)?

- a. The disease that is often mistaken for measles
- b. A complication of measles that happens only in adults
- c. A complication of measles that happens only in children
- d. A complication of measles that happens only in newborns

17. What is the most common way of measles transmission?

- a. Droplet
- b. Airborne
- c. Contact
- d. Oral

18. What is the most common way of measles transmission?

- a. Droplet
- b. Oral
- c. Airborne
- d. Contact
